

Gleeson Steel & Engineering

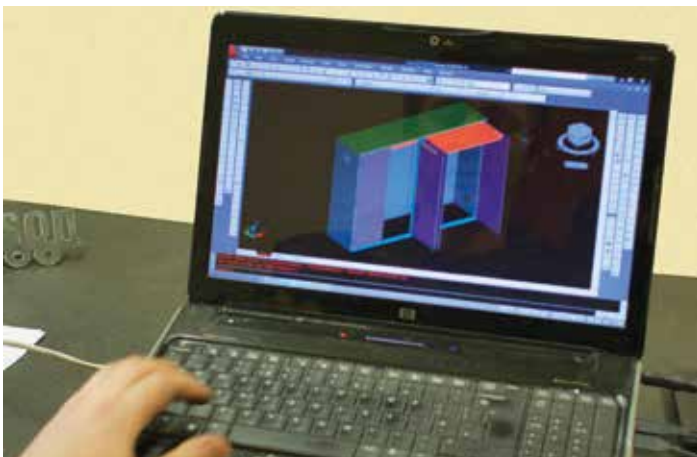

SHEET METAL WORKING

Gleeson Steel & Engineering Ltd. provides steel engineering solutions to both the commercial and agricultural sectors. We aim to supply quality products using the most sophisticated design and development tools.

Following over forty years in manufacturing our reputation for delivering timely, competitive and valued products is nationally recognised. Our Staff are trained and certified in every aspect of steel fabrication, facilitating the delivery of steel products measured and cut to precision. Both staff and machinery adhere to the highest safety regulations.

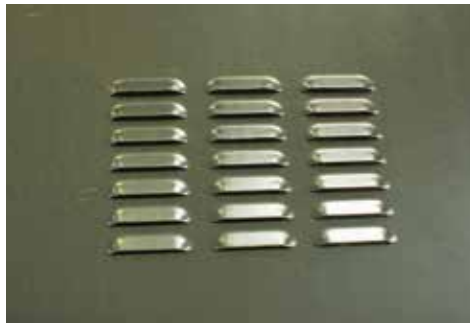

Equipment and facilities include a Saw and CNC Drill Line, a CNC Angle Line, a CNC Plate Line, a Spray Paint Workshop and a Powder Coating Plant.

DRAWING / DESIGN

Our Drawing Team uses the latest computing technologies in the design of all our products. Their Technical capabilities are unlimited and clearly visible in the use of our in-house Radan System. Radan is the total CAD, CAM solution for the sheet metal industry. Radan provides the software applications that are essential to design (2D & 3D), manufacture (Punching, Profiling, Nesting and Bending) and control production (cost estimation, process management) of sheet metal components and products.

We aim to produce the most innovative designs and solutions for all our products independent of size or quantity. We deliver a service which we as a company can be proud of.

LOCATION

Based in Tipperary, located half way between Cork and Dublin, just off the M8 near Urlingford, we are ideally situated to offer products and services throughout Ireland.
